Blended Learning
Advantages and Disadvantages
in the Classroom

ALLA V. KRASULIA
PHD IN EDUCATION SCIENCE,
SENIOR LECTURER,
SUMY STATE UNIVERSITY, UKRAINE
KRASALLA77@GMAIL.COM
Language education refers to the process and practice of acquiring a second/foreign language. It primarily is a branch of applied linguistics, however can be considered an interdisciplinary field.
Increasing globalization has created a great need for people in the workforce who can communicate in multiple languages:

❖ communicative competencies
❖ proficiencies
❖ cross-cultural experiences
❖ multiple literacies
There are many approaches, methods, and techniques (strategies) of teaching languages.

One of the teaching strategies that has been a major growth point in the English Language Teaching (ELT) industry over the last ten years is **blended learning**. It combines *face-to-face teaching with distance education*, either computer-based or web-based.
Blended Learning (BL)

- BL is an education program that combines online digital media with traditional classroom methods.
- It requires the physical presence of both teacher and student, with some element of student control over time, place, path, or pace.
- While students still attend “brick-and-mortar” schools with a teacher present, in-person classroom practices are combined with computer-mediated activities regarding content and delivery.
- Blended learning is also used in professional development and training settings.
- A lack of consensus on a definition of blended learning has led to difficulties in research on its effectiveness in the classroom.
- Blended learning is also highly context-dependent and therefore a universal conception of it is hard to come by.
Blended Learning
combining the best teaching methods

teacher-led learning
Blended Learning School
online learning
“Blended learning” is used interchangeably in research literature as “personalized learning”, “differentiated instruction”, “hybrid learning”, “technology-mediated instruction”, “web-enhanced instruction”, “mixed-mode instruction”.

The concepts behind blended learning first developed in the 1960s, the formal terminology to describe it did not take its current form until the late 1990s.

In 2006, the term became more concrete with the publication of the first Handbook of Blended Learning by Bonk and Graham.
Models of Blended Learning

1. Rotation model
   - Station-Rotation model
   - Lab-Rotation model
   - Flipped-Classroom model
   - Individual-Rotation model

2. Flex model

3. Self-Blend model

4. Enriched-Virtual model

According to a report by the Innosight Institute, there are six major types of blended learning:

- Face to Face Driver
- Online Lab
- Rotation
- Self-Blend
- Flex
- Online Driver

© Innosight Institute, Inc.
Flipped classroom is a more recent coinage.

- Students are expected to watch lectures online at home, and do homework while they are in class.

**Flipped VS Traditional**

**Flipped**
- Teacher instructs lesson at home (video / podcast / book / website)
- Students work in class.
  - Deeper understanding of concepts, applications, and connections to content are made.
  - Students receive support as needed.

**Traditional**
- Teacher instructs
- Students take notes
- Students follow guided instruction
- Teacher gives assessment
- Students have homework
It is important to note:

- Even BL models can be blended together and many implementations use some, many, or even all of these as dimensions of larger BL strategy.
- These models, for the most part, are not mutually exclusive.
- There are many components that can comprise a BL model, including:
  - instructor-delivered content, e-learning, webinars, conference calls, live or online sessions with instructors, and other media and events, e.g., Facebook, e-mail, chat rooms, blogs, podcasting, Twitter, YouTube, Skype and web boards.

Advantages of blended learning

• Blended instruction is **more effective** than purely face-to-face or purely online classes.

• BL methods can also **result in high levels of student achievement** more effective than face-to-face learning.

• By using a combination of digital instruction and one-on-one face time, **students can work on their own with new concepts** which frees teachers up to circulate and support individual students who may need individualized attention.

• Rather than playing to the lowest common denominator – as they would in a traditional classroom – **teachers can now streamline their instruction to help all students reach their full potential.**
Advantages of blended learning

- **BL facilitates a simultaneous independent and collaborative learning experience** for university students.
- The use of information and communication technologies has been found to **improve student attitudes towards learning**.
- By incorporating IT into class projects, **communication between lecturers and part-time students has improved**, and students were able to better evaluate their understanding of course material via the use of computer-based qualitative and quantitative assessment modules.
- **BL also has the potential to reduce educational expenses**, and **lower costs** by putting classrooms in the online space and it essentially replaces pricey textbooks with electronic devices.
Advantages of blended learning

- **BL gives the opportunity for data collection and customization of instruction and assessment** as two major benefits of this approach. It includes software that automatically collects student data and measures academic progress, providing teachers, students and parents detailed students’ data (e.g. Stuudium in Estonia). Often, tests are automatically scored, providing instantaneous feedback. Student logins and work times are also measured to ensure accountability.

- Schools with BL programs may also choose to **reallocate resources to boost student achievement outcomes.**

- Students with special talents or interests outside of the available curricula use educational technology to **advance their skills or exceed grade restrictions.**
Advantages of blended learning

- BL allows for **personalized education**, replacing the model where a teacher stands in front of the classroom and everyone is expected to stay at the same pace. It allows **students to work at their own pace**, making sure they fully understand new concepts before moving on.

- A classroom environment that incorporates BL naturally requires learners to **demonstrate more autonomy, self-regulation**, and independence in order to succeed.

- This virtual learning environment helps connect **professors with students** without physically being present, thus making this a ‘**virtual café**’. 
Advantages of blended learning

- The advantages of BL are dependent on the quality of the programs being implemented. Some indicators of excellent dependent programs are:
  * facilitating student learning,
  * communicating ideas effectively,
  * demonstrating an interest in learning,
  * organizing effectively,
  * showing respect for students,
  * and assessing progress fairly.
Disadvantages of blended learning

- Unless successfully planned and executed, BL could have disadvantages in technical aspects since it has a strong dependence on the technical resources or tools with which the BL experience is delivered. These tools need to be reliable, easy to use, and up to date, for them to have a meaningful impact on the learning experience.

- **IT literacy** can serve as a significant barrier for students attempting to get access to the course materials, making the availability of high-quality technical support paramount.

- Other aspects of BL that can be challenging is **group work** because of difficulties with management in an online setting.
Disadvantages of blended learning

- The **use of lecture recording technologies** can result in students **falling behind on the materials**. In a study performed across four different universities, it was found that **only half of the students** watched the lecture videos on a regular basis, and nearly **40% of students** watched several weeks’ worth of videos in one sitting.

- From an educator’s perspective, most recently, it has been noted that **providing effective feedback is more time-consuming** (and therefore more expensive) when electronic media are used, in comparison to traditional (e.g. paper-based) assessments.
Disadvantages of blended learning

- **Using e-learning platforms** can be more time consuming than traditional methods and can also come with new costs as e-learning platforms.

- Another critical issue is **access to network infrastructure**. Although the digital divide is narrowing as the Internet becomes more pervasive, many students do not have access to the Internet, even in their classrooms. Any attempt to incorporate BL strategies into an organization’s pedagogical strategy needs to account for this. This is why learning centers are built with good Wi-Fi connections to make sure this issue is addressed.
Great success often comes from great collaborations, so it is exciting to see how educational technology (EduTech) is giving both students and teachers more opportunities to network through the use of collaborative tools such as Google Docs, online calendars, and virtual workrooms. Plus, Skype, email, and even texting allow us to stay in touch with each other and meet colleagues from around the world.
Our people
